

UNI STORE

COMPLETE SPECIFICATIONS DOCUMENT

SaaS Multi-Store E-commerce Platform

Version 1.0

Prepared by:

1. Soufiane Chbicheb

UNI STORE © 2025 — Confidential

1. Introduction

1.1 Project Context

With digital transformation and the rise of e-commerce, many merchants are looking to create their own online store without having to develop a complex technical solution. SaaS solutions today make it possible to simplify the creation and management of online stores.

1.2 General Presentation of UNI STORE

UNI STORE is a multi-tenant SaaS platform that allows merchants to create, manage, and administer their online store through a centralized interface.

Each vendor can manage their products, orders, and employees, while the platform Administrator supervises the entire system.

1.3 Problem Statement

How can we offer a centralized, secure, and scalable platform that enables:

- Multi-store management
- User and role management
- Subscription management
- Global oversight by a Super Admin

— while guaranteeing performance, security, and scalability?

2. Project Objectives

2.1 General Objective

Develop a secure and high-performing multi-store SaaS platform that allows merchants to manage their online business autonomously.

2.2 Specific Objectives

- Implement a multi-tenant architecture.
- Implement an RBAC (Role-Based Access Control) system.
- Enable subscription management (Basic, Pro, Premium).
- Ensure complete store management.
- Provide an advanced analytics dashboard.
- Guarantee traceability of actions (logs).
- Ensure compliance and content moderation.

3. Project Scope

3.1 What's Included

User Management

- Registration / Login
- Role management (Super Admin, Store Admin, Manager, Support, Client)
- Account activation / deactivation
- Activity history

Store Management

- Store creation
- Validation by Super Admin
- Suspension / Deletion
- Multi-employee management

Product Management

- Product CRUD
- Category management
- Image upload
- Stock management

Order Management

- Order tracking
- Status management
- Customer history

Subscription Management

- Plan creation
- Payment management
- Limits per plan

Reporting & Dashboard

- Global statistics
- Financial reports
- Store performance
- Advanced analytics dashboard (charts, KPIs, exports)

3.2 What's Excluded

- Physical delivery/shipping (external logistics)
- Advanced ERP integration
- Marketplace between stores
- Full accounting management

- Native mobile application (initial version)
- Advanced artificial intelligence

4. System Actors

The UNI STORE system relies on a multi-role architecture based on the RBAC (Role-Based Access Control) principle. Each actor has specific permissions according to their access level.

4.1 Administrator (Super Admin)

The Super Admin is the highest level of authority on the UNI STORE platform.

Responsibilities and actions:

- Global user management
- Global store management
- Validation or suspension of stores
- Subscription and plan management
- Financial management and commissions
- Role and permission management (global RBAC)
- Moderation and compliance
- General platform configuration
- Viewing global statistics
- Access to system logs

Access level: Full access to the entire system.

4.2 Vendor (Store Owner)

The Store Owner is responsible for a specific store on the platform.

Responsibilities and actions:

- Creation and configuration of their store
- Product and category management (CRUD)
- Stock management
- Order tracking
- Management of their store's customers
- Viewing internal statistics
- Management of internal employees (Admin, Manager, Support)
- Assignment of internal roles
- Management of their subscription

Access level: Full access to their own store only (multi-tenant isolation).

4.3 End Client

The Client is the end user who purchases products through the stores hosted on the platform.

Responsibilities and actions:

- Creating and managing a personal account
- Browsing products and categories
- Product search and filtering
- Adding to cart
- Placing an order
- Online payment
- Order tracking
- Viewing purchase history
- Posting reviews and product ratings
- Managing profile (photo, password, personal information)

Access level: Limited access to their own account and to public stores only.

4.4 Store Admin

The Store Admin is an internal employee appointed by the Store Owner.

Responsibilities and actions:

- Complete product management
- Category management
- Order management
- Viewing customers
- Viewing statistics
- Supervision of Managers and Support
- Modification of certain internal settings

Access level: Broad access to the store, but no control over the subscription or deletion of the store.

4.5 Manager

The Manager is responsible for day-to-day operational management.

Responsibilities and actions:

- Product management
- Order tracking
- Status updates
- Viewing operational statistics
- Internal communication

Access level: Limited operational access, without role or sensitive settings management.

4.6 Support

Support primarily manages customer relations.

Responsibilities and actions:

- Viewing orders
- Customer assistance
- Complaint handling

- Responding to messages
- Viewing customer information

Access level: Limited access to customer support only.

5. Functional Description

5.1 Account Management

5.1.1 User (Client)

A. Registration & Authentication

Feature: Account Creation — Client

Account creation allows the client to register on the UNI STORE platform in order to benefit from the following services: placing orders, adding product reviews, managing their profile, and receiving notifications. Registration can be done via email or phone number. Each account must be validated before use to guarantee security and the client's uniqueness in the system.

Form fields and functional validation:

Field	Type	Description	Validation
Last name	Text	Client's full last name	Cannot be empty
First name	Text	Client's first name	Cannot be empty
Email	Email	Email address for login	Must be valid (correct format) and unique in the system
Password	Password	Password for login	Minimum 8 characters, must contain a digit and an uppercase letter
Password confirmation	Password	Repeat the password for confirmation	Must match the password exactly
Phone (optional)	Text	Client's phone number	If provided, must be a valid number
Terms acceptance	Checkbox	Confirmation of client's agreement to Terms & Conditions	Must be checked before registration

Functional validation rules:

- All required fields must be filled in before submitting the form.
- Passwords must match and comply with complexity rules.
- The email must be unique in the system, otherwise the user receives an error message.
- Phone validation is only required if it is provided.
- The Terms checkbox must be checked, otherwise registration is refused.

Usage scenario:

- Step 1: Access the registration page — the client clicks "Sign up" from the home page.
- Step 2: Fill in the form — the client enters: last name, first name, email, password, password confirmation, phone (optional), and checks the Terms box.
- Step 3: Field validation — the system checks: all required fields are filled, email format is correct and unique, password is valid and matches confirmation, Terms box is checked.

- Step 4: Account creation and activation — if all validations pass, the system creates the account and sends a confirmation email or SMS. If a validation fails, a precise error message tells the client which field to correct.
- Step 5: Login — after activation, the client can log in with their credentials and access available features.

Feature: Secure Login — Client

The secure Login feature allows the client to log into their UNI STORE account to access platform services such as placing orders, managing their profile, and viewing their purchase history. Authentication can be done via email and password or via OAuth / social login (Google, Facebook). This security guarantees account integrity and personal data protection.

Form fields and functional validation:

Field	Type	Description	Validation
Email / Phone	Email / Text	Identifier used to log in	Required field, must be a valid email or an existing valid phone number in the system
Password	Password	Account password	Required field, must match the password stored for the account
OAuth / social login option	Button / Link	Login via Google or Facebook account	If selected, authentication is performed via the OAuth provider and the account must be linked to an existing user

Functional validation rules:

- All required fields must be filled in before submission.
- The email or phone must correspond to an existing account.
- The password must match the one stored for that account.
- If OAuth/social login is used, the system must verify that the social account is linked to a valid UNI STORE client account.
- In case of error, the system displays a precise message (e.g., "Incorrect email or password").

Usage scenario:

- Step 1: Access the login page — the client clicks "Log in" from the home page.
- Step 2: Choose authentication method — Option 1: enter Email/Phone + Password; Option 2: log in via Google or Facebook.
- Step 3: System validation — for Email/Phone + Password: credential and password match verification; for OAuth/social login: redirect to the OAuth provider, then link with the existing client account.
- Step 4: Successful login — the user is redirected to their client Dashboard / Home page; a secure session is established.
- Step 5: Error handling — if credentials are incorrect, the system displays a message and offers password recovery; if OAuth/social login is not linked, the system offers to create an account or link the existing social account.

Feature: Forgot Password Recovery — Client

The Forgot Password Recovery feature allows a client who has forgotten their password to reset access to their UNI STORE account. The system sends a secure reset link either by email or by SMS, depending on the mode chosen during registration. This feature ensures security and continuity of access without compromising personal data.

Form fields and functional validation:

Field	Type	Description	Validation
Email or Phone	Email / Text	Identifier used for the account	Required field, must match an existing account
New password	Password	New password chosen by the user	Required field, minimum 8 characters, must contain letters and digits
Confirm new password	Password	Confirmation of the new password	Required field, must match the new password exactly
Send-link option	Radio Button	Choice of link delivery method (Email or SMS)	Required field, must select an option available for this account

Functional validation rules:

- The email or phone must correspond to an existing account.
- The reset link must be valid for a limited time (e.g., 30 minutes).
- The new password must comply with the security policy (length, complexity).
- The confirmation password must match the new password.
- If the user does not choose a delivery method, the system blocks submission and displays an error message.

Usage scenario:

- Step 1: Access the "Forgot password" page — the client clicks "Forgot password?" from the login page.
- Step 2: Enter the identifier — the client enters their email or phone number used for the account.
- Step 3: Choose the delivery method — the client chooses to receive the reset link by email or SMS.
- Step 4: Send the secure link — the system generates a unique link with an expiration, sent via the chosen method.
- Step 5: Reset the password — the client clicks the received link and accesses a form to enter the new password and confirmation; the system validates compliance and matching of fields.
- Step 6: Confirmation and login — after validation, the password is updated; the user can log in immediately with the new password.
- Step 7: Error handling — if the link is expired or invalid, the system informs the user and offers to generate a new link; if passwords don't match or don't comply with the policy, a precise message is displayed.

Feature: Account Activation — Client

The Account Activation feature validates a new client account on UNI STORE after registration. Each account must be activated via email or phone number to guarantee that the client is indeed the owner of the provided identifier and to secure access to the platform.

Form fields and functional validation:

Field	Type	Description	Validation
Email or Phone	Email / Text	Identifier used for registration	Required field, must correspond to a newly created account
Validation code	Text / Numeric	Unique code sent by email or SMS	Required field, must exactly match the code generated by the system
"Activate" button	Button	Validate and activate the account	Active only if the code is correct and not expired

Functional validation rules:

- The validation code must be unique and temporary (valid for 30 minutes).
- The email or phone number must correspond to an account in "pending activation" status.
- If the code is incorrect or expired, the system refuses activation and offers to resend a new code.
- After successful activation, the account moves to "active" status and the client can log in.

Usage scenario:

- Step 1: Registration completed — the client finishes the registration form and submits their information; the system creates an account in "pending activation" status.
- Step 2: Sending the validation code — the system sends a unique code by email or SMS according to the mode chosen at registration.
- Step 3: Entering the code — the client opens the email or SMS, retrieves the code, and enters it on the activation page.
- Step 4: System validation — the system checks that the code is correct and not expired.
- Step 5: Successful activation — the account becomes active; the client receives confirmation and can log in immediately.
- Step 6: Error handling — if the code is incorrect or expired, a message is displayed: "Invalid or expired code, please request a new code." The client can request the code be resent.

Feature: Logout — Client

The Logout feature allows the client to end their active session on the UNI STORE platform in order to secure their account and protect their personal data. This action guarantees that no one else can access the account from the same device once the session has ended.

Form fields and functional validation:

Field	Type	Description	Validation
"Logout" button	Button	Ends the user's session	Required to trigger the session-closing

			action
Confirmation (optional)	Pop-up / Modal	Confirmation request before logging out	The user must click "Confirm" to end the session

Functional validation rules:

- The user's session must be terminated immediately after the action.
- All session cookies and tokens must be invalidated to prevent any reuse.
- After logout, the client is redirected to the home or login page.
- If the user tries to access protected pages after logging out, the system must block access and redirect to the login page.

Usage scenario:

- Step 1: Access the Logout button — the client is logged into their account and clicks the "Logout" button visible on the dashboard or user menu.
- Step 2: Confirmation (if applicable) — a pop-up may ask: "Do you really want to log out?" The user confirms to continue.
- Step 3: Session closure — the system ends the active session and invalidates cookies and tokens.
- Step 4: Redirection — the user is redirected to the home or login page.
- Step 5: Post-logout security — any attempt to access secured pages without logging in again is blocked, with the message: "Please log in to access this page."

B. Profile Management — Client

Feature: Editing Personal Information — Client

The Editing Personal Information feature allows the client to update their personal data on UNI STORE to ensure profile accuracy and proper communication with the platform. Editable information includes: last name, first name, email, phone.

Form fields and functional validation:

Field	Type	Description	Validation
Last name	Text	Client's full last name	Required field, cannot be empty
First name	Text	Client's first name	Required field, cannot be empty
Email	Email	Email address for login and notifications	Required field, valid email format, must be unique in the system
Phone	Text	Phone number for contact	Optional field, must be a valid number if filled

Functional validation rules:

- All required fields must be filled in to submit the change.
- The email must be in a valid format and not already used by another account.
- The phone number, if provided, must contain only digits and follow the national format.

- In case of error, a clear message is displayed to correct the relevant field.
- After validation, the profile information is updated immediately in the system.

Usage scenario:

- Step 1: Access the profile page — the client is logged in and accesses their Dashboard or user menu, then clicks "Edit my personal information".
- Step 2: Enter new information — the client updates last name, first name, email, phone as needed.
- Step 3: Form validation — the system checks: required fields filled, valid and unique email format, valid phone if provided.
- Step 4: Confirmation and save — the changes are saved; the client receives a confirmation message: "Your information has been updated successfully."
- Step 5: Error handling — if a field is invalid, the form precisely indicates the error to correct before submitting.

Feature: Profile Photo — Client

The Profile Photo feature allows the client to personalize their UNI STORE account by adding, changing, or removing their photo. This feature improves the user experience and facilitates visual recognition of the account on the platform.

Form fields and functional validation:

Field	Type	Description	Validation
Photo upload	File / Image	Allows selecting an image from the computer or mobile device	Accepted format: JPEG, PNG; maximum size: 5 MB
Edit button	Button	Allows replacing the current photo with a new one	Format and size verification before validation
Delete button	Button	Allows deleting the current photo	Removes the image from the account and restores a default photo

Functional validation rules:

- The uploaded file must comply with the accepted format (JPEG, PNG) and maximum size (5 MB).
- If the file does not meet these criteria, the system displays a precise error message.
- The change immediately replaces the existing photo after validation.
- Deletion restores the default image and frees the associated storage space.

Usage scenario:

- Step 1: Access the profile page — the client is logged in and accesses their Dashboard / Profile Settings.
- Step 2: Upload or change — the client clicks "Add / Change photo", selects the file from the device; the system validates format and size.
- Step 3: Validation and display — if valid, the photo is saved and shown in the profile; confirmation message: "Your profile photo has been updated successfully."
- Step 4: Photo deletion — the client clicks "Delete photo"; the system removes the photo and shows the default image; confirmation: "Your profile photo has been deleted."
- Step 5: Error handling — if the format or size is incorrect, a clear message: "Unsupported format or file too large. Please select a JPEG or PNG file under 5 MB."

Feature: Password Change — Client

The Password Change feature allows the client to change their current password to strengthen the security of their UNI STORE account. This action requires entering the current password to verify the client's identity, as well as confirming the new password to avoid entry errors.

Form fields and functional validation:

Field	Type	Description	Validation
Current password	Password	Account's current password	Required field, must exactly match the password stored in the system
New password	Password	New password chosen by the client	Required field, minimum 8 characters, must contain at least one letter and one digit
Confirm new password	Password	Confirmation of the new password	Required field, must exactly match the new password

Functional validation rules:

- The current password must be correct to validate the change.
- The new password must comply with the security policy (length, letters, and digits).
- The confirmation must exactly match the new password.
- After validation, the system updates the password in the database.

Usage scenario:

- Step 1: Access the profile page — the client is logged in and accesses "Change password" from the Dashboard or profile menu.
- Step 2: Enter the fields — current password, new password, confirm new password.
- Step 3: System validation — verify current password matches, check the new password's complexity, verify the confirmation matches exactly.
- Step 4: Password update — if all validations pass, the password is updated immediately; confirmation message: "Your password has been changed successfully."
- Step 5: Error handling — if the current password is incorrect: "The current password is incorrect." If the new password does not comply: "The new password must contain at least 8 characters, including a letter and a digit." If the confirmation doesn't match: "The password confirmation does not match the new password."

Feature: Multiple Delivery Addresses — Client

The Multiple Delivery Addresses feature allows the client to manage several delivery addresses in their UNI STORE account. It offers the ability to add, edit, or delete addresses and to set a primary address, used by default during the checkout process.

Form fields and functional validation:

Field	Type	Description	Validation
Recipient last name	Text	Full last name of the person receiving the delivery	Required field, cannot be empty
Recipient first name	Text	First name of the person receiving the	Required field,

		delivery	cannot be empty
Address	Text / Text area	Full address (street, number, apartment)	Required field, cannot be empty
City	Text	Delivery city	Required field, cannot be empty
Postal code	Text	Corresponding postal code	Required field, valid format according to country
Country	Text / Dropdown	Delivery country	Required field, selection from the available list
Phone number	Text	Contact number for delivery	Required field, must be valid
Primary address	Checkbox / Radio	Set as primary address	If checked, this address becomes the default for all orders

Functional validation rules:

- All required fields must be filled to add or edit an address.
- The postal code must comply with the format of the selected country.
- The phone number must be valid and complete.
- Only one address can be set as primary at a time.
- When deleting a primary address, the system prompts the user to select a new primary address if other addresses exist.

Usage scenario:

- Step 1: Access address management — the client is logged in and accesses "My delivery addresses" from the Dashboard.
- Step 2: Add a new address — click "Add an address", fill in last name, first name, address, city, postal code, country, phone; optionally check "Primary address"; validate to save.
- Step 3: Edit an existing address — click the address to edit, update the necessary fields, validate to save.
- Step 4: Delete an address — click "Delete", confirm the deletion; if it was the primary address, the system prompts to choose a new primary address.
- Step 5: Set primary address — select the "Primary address" option on the desired address; the system automatically updates the current primary address.
- Step 6: Error handling — if a required field is empty: "This field is required." If the postal code or phone format is invalid: precise correction message. If no address is set as primary: a warning to choose a default address.

C. Catalog & Products — Client

Feature: Catalog Browsing — Client

The Catalog Browsing feature allows the client to browse the full range of products available on UNI STORE. It provides advanced filtering and sorting tools to facilitate the search for and discovery of products matching the client's needs and preferences.

Form fields and functional validation:

Field / Filter	Type	Description	Validation
Keyword search	Text	Allows searching for a product by name	Optional field, can be

		or description	empty
Category filter	Dropdown / Checkbox	Selection of the product category	If selected, filters products in that category
Price filter	Slider / Text	Minimum and maximum price range	Numeric value, $\min \leq \max$
Niche filter	Dropdown / Checkbox	Selection of a specific niche	Filters products associated with the niche
Popularity filter	Checkbox / Sort	Shows the most popular products by sales or reviews	Optional field
Product sorting	Dropdown	Sort by price (asc/desc), rating, newest	If selected, sorts the list according to the chosen criterion
View product details	Button / Link	Access the detailed product page	The product must exist in the database

Functional validation rules:

- All filters must display only available products (stock > 0).
- Sorting must be applied correctly according to the selected criterion.
- Filters can be combined (e.g., category + price + niche) to refine the search.
- Keyword search must be case-insensitive and include partial matches.
- If no products match the criteria, a clear message is displayed: "No product matches your filters."

Usage scenario:

- Step 1: Access the catalog — the client clicks "Catalog" or "All products" from the home page.
- Step 2: Apply filters — select desired filters: category, price, niche, popularity; filters can be combined.
- Step 3: Sort products — choose a sort criterion (price, rating, newest); the product list updates instantly.
- Step 4: View details — the client clicks a product to access its detail page (description, images, price, stock, reviews).
- Step 5: Error handling or empty results — if no product matches, the system displays: "No product found. Please adjust your filters or search for another keyword."

Feature: Detailed Product Page — Client

The Detailed Product Page feature allows the client to view all essential information about a product before purchasing. It provides a full description, multiple images, price, available stock, and customer reviews, to help the client make an informed purchasing decision.

Form fields and functional validation:

Field	Type	Description	Validation
Description	Text / Text area	Full product details: characteristics, materials, dimensions	Required field, must be complete and legible
Images	Gallery / Slider	Multiple product images	Minimum 1 image, JPEG/PNG format, size ≤ 5 MB per image
Available stock	Number	Quantity available for purchase	Required field, must be ≥ 0
Price	Number /	Product price	Required field, valid

	Monetary		monetary format
Customer reviews	List / Block	Ratings and comments from customers	Displayed sorted by date or rating, filterable by star rating

Functional validation rules:

- The description must be present and complete.
- Images must comply with the format and maximum size.
- Stock must reflect the real quantity available in the database.
- The price must be correct and display any applicable discount or promotion.
- Displayed customer reviews must be validated by the system and linked to the exact product.
- If the product is out of stock, the system displays a clear message: "Product temporarily unavailable."

Usage scenario:

- Step 1: Access the product page — the client clicks a product from the catalog list or search results.
- Step 2: View information — the client sees: full description, multi-image gallery (zoom, slideshow), current price and promotions, available stock.
- Step 3: View reviews — the client can read reviews sorted by date or rating; option to filter by number of stars.
- Step 4: Error handling — if the product no longer exists or was removed: "This product is no longer available." If stock = 0: "Product temporarily unavailable."
- Step 5: Additional actions — add to cart, add to wishlist, share the product.

D. Review Management — Client

Feature: Add a Review — Client

The Add a Review feature allows the client to share their experience and opinion on a UNI STORE product they have purchased or viewed. Each review includes a star rating (1 to 5) and a text comment, to help other customers make an informed decision.

Form fields and functional validation:

Field	Type	Description	Validation
Product rating	Star selector (1-5)	Rating given to the product by the client	Required field, must be an integer between 1 and 5
Text comment	Text / Text area	Client's detailed comment on the product	Required field, minimum 10 characters, maximum 1000 characters
"Submit" button	Button	Submit the review to the system	Active only if all required fields are filled and valid

Functional validation rules:

- The rating must be between 1 and 5 stars.
- The comment must respect the minimum and maximum length.

- The review is linked to the specific product and to the user who wrote it.
- After validation, the review is stored in the database and may appear on the product page.
- Reviews containing inappropriate terms may be flagged and blocked by the system.

Usage scenario:

- Step 1: Access the review section — the client is logged in, accesses the product page, and clicks "Add a review" or "Write a review".
- Step 2: Enter rating and comment — select the star rating (1 to 5), write the text comment (minimum 10 characters).
- Step 3: System validation — check the rating is between 1 and 5, check the comment meets the required length.
- Step 4: Submit the review — the client clicks "Submit"; the system stores the review in the database and displays it on the product page.
- Step 5: Error handling — if a required field is empty: "Please fill in all required fields." If the comment is too short or too long: "The comment must be between 10 and 1000 characters."

Feature: Edit / Delete a Personal Review — Client

The Edit / Delete a Personal Review feature allows the client to correct or withdraw a review they previously published on a UNI STORE product. This feature ensures the client can update their opinion or remove the review if necessary, maintaining the relevance and accuracy of product feedback.

Form fields and functional validation:

Field / Action	Type	Description	Validation
Edit rating	Star selector (1-5)	Allows changing the product rating	Required field, integer between 1 and 5
Edit comment	Text / Text area	Allows correcting or improving the comment	Required field, minimum 10 characters, maximum 1000 characters
"Save changes" button	Button	Submit the changes	Active only if all fields meet the criteria
"Delete review" button	Button	Deletes the review from the product	Confirmation required before deletion

Functional validation rules:

- The edit can only be performed by the client who posted the review.
- The rating must remain between 1 and 5 stars.
- The comment must respect the minimum and maximum length.
- After editing, the review is updated in the database and displayed with the last-modified date.
- Deletion permanently removes the review from the product, and the client receives confirmation.

Usage scenario:

- Step 1: Access reviews — the client is logged in and accesses the product page or "My reviews", then selects the review to edit or delete.

- Step 2: Edit a review — click "Edit", update the rating and/or comment, click "Save changes"; confirmation message: "Your review has been edited successfully."
- Step 3: Delete a review — click "Delete", the system requests confirmation: "Do you really want to delete your review?"; after confirmation, the review is permanently removed; confirmation message: "Your review has been deleted."
- Step 4: Error handling — if a required field is empty or the comment is too short/long: clear correction message. If attempting to edit or delete another user's review: access denied with an error message.

5.1.2 Store Owner

A. Account Creation and Management

The store owner must be able to create a user account in order to access the platform.

Registration / Account creation:

- Registration can be done via email address or phone number.
- Mandatory verification of the email or phone number is required before the account is activated.

Secure login:

- Authentication via identifier (email/phone) and password.
- Ability to authenticate via external services (OAuth / social networks such as Google, Facebook...).

Forgot password recovery:

- Automatic sending of a reset link by email or a code by SMS.
- The link or code must be temporary and secure.

Account activation:

- The owner's account only becomes active after email or phone number validation.
- Until validation is completed, access to features remains limited or blocked.

Logout:

- The owner must be able to end their user session at any time.
- Logout must invalidate the active session on the device used.

Feature: User Profile Management — Store Owner

The User Profile Management feature allows the store owner to view and edit their personal information linked to their user account on the UNI STORE platform. This feature concerns only account management (identity and security), not the commercial management of the store. It guarantees: proper updating of personal data, security of the owner's account, protection of access to the store's dashboard.

Form fields and functional validation:

Field / Action	Type	Description	Validation
Last name	Text	Owner's last name	Required field, minimum 2 characters
First name	Text	Owner's first name	Required field, minimum 2 characters
Email	Email	Email address used for login	Required field, valid format, unique
Phone	Numeric	Owner's phone number	Valid format according to country
Profile photo	Image	Owner's photo (optional)	JPG/PNG format, max size 5MB

Current password	Password	Current password for confirmation	Required for modification
New password	Password	New secure password	Minimum 8 characters, uppercase + digit
Confirm password	Password	Confirmation of the new password	Must match
"Save changes" button	Button	Validate the changes	Active only if fields are valid

Functional validation rules:

- Only the logged-in owner can edit their profile.
- The email must be unique in the database.
- Any change to the email requires new verification.
- To change the password: the current password must be correct and the new one must comply with security rules.
- The profile photo must comply with the allowed format and size.
- All changes must be saved to the database immediately.

Usage scenario:

- Step 1: Access profile — the owner is logged in and accesses "My profile" from their dashboard.
- Step 2: Edit personal information — edit last name, first name, email, or phone; click "Save changes"; message displayed: "Your information has been updated successfully."
- Step 3: Change password — enter the current password, enter the new password, confirm the new password, submit; message displayed: "Your password has been changed successfully."
- Step 4: Error handling — invalid email → error message; incorrect current password → access denied; non-compliant new password → explanatory message; invalid image format → error message.

Feature: Internal Roles and Permissions Management — Store Owner

The Internal Roles and Permissions Management feature allows the store owner to create and manage secondary accounts for their store's employees. It helps organize internal store management, restrict access to sensitive sections, and ensure security and control over actions performed.

Field / Action	Type	Description	Validation
Employee name	Text	Employee's full name	Required field
Employee email	Email	Address used for login	Required field, unique
Internal role	Dropdown list	Role selection (Store Admin, Product Manager, Order Support)	Required field
Specific permissions	Checkboxes	Selection of accessible sections (Products, Orders, Statistics...)	At least one permission must be selected
"Create user" button	Button	Creates an internal account	Active only if all fields are valid
"Edit role" button	Button	Edits existing permissions	Confirmation required
"Revoke access" button	Button	Removes an employee's access	Confirmation required

Internal role types:

Store Admin

- Full access to the store dashboard

- Product management
- Order management
- Access to statistics

Product Manager

- Add / edit / delete products
- Manage stock and promotions
- No access to sensitive financial statistics

Order Support

- View orders
- Update statuses
- Communicate with customers
- No access to product management or critical settings

Functional validation rules:

- Only the store owner can create or modify internal roles.
- Each employee must have a unique email.
- Permissions must be clearly defined and saved to the database.
- Any role change must be applied immediately.
- Revoking access must immediately invalidate the employee's active session.
- All actions must be recorded in an activity log.

Usage scenario:

- Step 1: Access role management — the owner accesses the "Internal users" section.
- Step 2: Create an employee — enter name and email, select an internal role, define specific permissions, click "Create user"; message displayed: "Internal user created successfully."
- Step 3: Edit permissions — select an existing employee, edit role or permissions, save; message displayed: "Permissions updated successfully."
- Step 4: Revoke access — click "Revoke access"; confirmation requested: "Do you really want to remove this user's access?"; access removed and session invalidated.

5.1.3 Super Admin

A. Global User Management

The Global User Management feature allows the Super Admin to administer all users of the UNI STORE platform. It provides full control over Client accounts, Store Owner accounts, and Administrator accounts. This feature guarantees complete oversight, security, and traceability of actions performed on user accounts.

Action / Element	Type	Description	Validation
User list	Table	Display of all users (Clients, Store Owners, Admins)	Paginated loading for performance
Search	Search bar	Search by name, email, or ID	Dynamic results
Filtering	Filters	Filter by type, status, registration date	Applied immediately
Activate / Deactivate	Button	Change account status	Confirmation required
Delete account	Button	Permanent deletion of a user	Confirmation required + restrictions
Edit data	Form	Edit email, phone, status	Field validation

Activity history	View	View user actions and logins	Read-only
------------------	------	------------------------------	-----------

Detailed features:**Global overview:**

Display of all users with: name, email, type (Client / Store Owner / Admin), status (Active, Suspended, Deactivated), registration date.

Search and filtering:

- Filter by: user type, account status, registration date
- Search by name or email

Status management:

- Activate a suspended account
- Temporarily deactivate an account
- Suspend in case of violation

Account deletion:

- Permanent deletion if necessary
- Mandatory confirmation request

Data editing:

- Email correction
- Phone update
- Status modification

Activity history:

- View recent logins
- Actions performed by the user
- Suspicious login attempts

Functional constraints:

- Deleting the main Super Admin is strictly forbidden.
- Every action (activation, deletion, modification) must be recorded in a logging system (traceability).
- Critical actions must require explicit confirmation.
- Deleted data must comply with GDPR rules where applicable.

Usage scenario:

- Step 1: Access the section — the Super Admin accesses the dashboard → "User management".
- Step 2: Search and filtering — filters by type or searches for a specific user.
- Step 3: Administrative action — activate, suspend, or edit an account; confirmation displayed before validation.
- Step 4: Traceability — the system automatically logs the action in the audit journal.

B. Store Management (Multi-tenant management) — Super Admin

The Store Management (Multi-tenant management) feature allows the Super Admin to administer all stores registered on the UNI STORE platform. In a multi-tenant environment, each store operates as an independent entity, but remains under the platform's overall supervision. This feature guarantees: quality control of stores, compliance with platform rules, oversight of business performance.

Action / Element	Type	Description	Validation
Store list	Table	Display of all registered stores	Pagination required
Search	Search bar	Search by store name or owner	Dynamic results
Filtering	Filters	Filter by status (Pending, Active, Suspended)	Applied immediately
Approve store	Button	Validate the publication of a new store	Confirmation required
Suspend / Deactivate	Button	Temporarily block a store	Reason required
Delete store	Button	Permanent deletion of a store	Confirmation required
Store performance	Table / Dashboard	View key indicators	Read-only

Detailed features:

Global store overview:

Display of the following information: store name, owner, status (Pending / Active / Suspended), creation date, number of products, revenue.

Approving a new store:

- When an owner creates a store, it may be set to "Pending" status.
- The Super Admin can: Approve → store becomes "Active" / Reject → store remains inactive with a reason

Suspension / Deactivation:

- In case of rule violation: temporary suspension, sales blocked
- Reason required and recorded in the system

Deleting a store:

- Permanent deletion in case of serious non-compliance
- Confirmation required
- Controlled impact on associated data (products, orders)

Performance monitoring:

The Super Admin can view: business performance of each store, number of orders, revenue generated, cancellation rate, average ratings.

General platform statistics:

- Total number of active stores
- Global platform revenue
- Top stores
- Monthly growth

Functional constraints:

- Every action (approval, suspension, deletion) must be recorded in the logging system.
- A suspended store cannot sell products.
- Deleting a store must comply with data retention rules.
- The Super Admin cannot modify internal business data without traceability.

Usage scenario:

- Step 1: Access the section — the Super Admin accesses the "Store management" module.
- Step 2: Review — views the list of stores; filters by status or searches for a specific store.
- Step 3: Administrative action — approve a new store, or suspend a non-compliant store, or delete permanently.
- Step 4: Logging — the system automatically records the action in the audit journal.

C. Subscription Management — Super Admin

The Subscription Management feature allows the Super Admin to administer the UNI STORE platform's subscription plans (SaaS model). It allows creating and configuring different subscription plans, defining limits and privileges associated with each plan, overseeing subscription-related payments, and managing service activation or suspension based on subscription status. This feature is essential to ensure the platform's financial viability and access control to advanced features.

Action / Element	Type	Description	Validation
Plan name	Text	Example: Basic, Pro, Premium	Required field, unique
Price	Monetary	Plan amount	Valid monetary format
Duration	List (Monthly / Annual)	Validity period	Required field
Functional limits	Parameters	Max number of products, employees, storage...	Numeric values ≥ 0
Plan status	Active / Inactive	Activate or deactivate a plan	Confirmation required
Active subscriptions list	Table	View stores and subscribed plans	Read-only
Payment history	Table	Track payments made	Traceability required

Detailed features:

Subscription plan creation:

The Super Admin can create several plans (Basic, Pro, Premium...) and define: price, duration (monthly or annual), functional limits.

Example limits: maximum number of products, maximum number of internal accounts, access to advanced statistics, priority support.

Limit management:

Each plan must clearly define: number of allowed products, number of internal accounts, access to certain premium features, storage capacity. The system must automatically enforce these limits.

Subscription activation / suspension:

- Automatic activation after payment validation
- Automatic suspension in case of non-payment
- Manual suspension possible by the Super Admin

Subscription payment tracking:

The Super Admin can view: payment history, transaction status (Paid, Pending, Failed), renewal date, amount paid. All transactions must be logged for audit.

Functional constraints:

- When a subscription expires: certain features must be automatically restricted or suspended (e.g., unable to add new products).

- An automatic notification must be sent: before expiration (e.g., 7 days before) and on the expiration day.
- The system must prevent any exceeding of limits defined by the plan.
- All plan changes must be recorded in the logging system.

Usage scenario:

- Step 1: Create a plan — the Super Admin creates a "Pro" plan, defines price, duration, and limits, and activates the plan.
- Step 2: Store subscription — the owner chooses the plan; payment is validated; the system automatically activates the corresponding features.
- Step 3: Expiration — 7 days before expiration → notification sent; upon expiration → features automatically restricted.

D. Financial and Commission Management — Super Admin

The Financial and Commission Management feature allows the Super Admin to oversee and control all financial aspects of the UNI STORE platform. It guarantees: the definition of commissions applied to sales, tracking of global transactions, visibility into total revenue, and the production of reliable financial reports.

Action / Element	Type	Description	Validation
Set commission	Numeric / percentage field	Percentage taken from each transaction	Between 0% and 100%, required
Global transactions	Table	View all transactions carried out on the platform	Read-only
Global revenue	Table / Dashboard	Display of total revenue generated	Automatic update
Financial reports	Button / Export	Generate and export (PDF, Excel) financial reports	Read-only and secure export
Filtering	Filters	Filter by period (day, month, year) or transaction type	Applied immediately

Detailed features:

Commission definition:

- The Super Admin can set a commission percentage taken from each sale made by a store.
- The percentage can be global or specific to a subscription type / plan.

Global transaction tracking:

Detailed display of each transaction: store / owner, sale amount, commission taken, status (Paid, Pending, Failed), date and time.

Global revenue:

- Automatic calculation of total revenue generated by all stores.
- Displayed as a table and charts for visual tracking.

Financial reports:

Ability to export financial reports in PDF or Excel format. Reports include: total sales, total commissions, detailed transactions, revenue per store. Filtering by period for historical analysis.

Functional constraints:

- All commission changes must be recorded in the logging system for traceability.
- Transactions must comply with GDPR rules and financial security standards.

- Total revenue must be recalculated automatically with each new transaction.
- Report exports must be secure and accessible only to Super Admins.

Usage scenario:

- Step 1: Set a commission — the Super Admin sets the global commission to 10%; the system automatically applies it to all future sales.
- Step 2: Transaction tracking — the Super Admin reviews the week's transaction list; verifies sales, commissions, and payment statuses.
- Step 3: View global revenue — the dashboard shows total revenue; charts show monthly evolution.
- Step 4: Export financial reports — click "Export reports"; select period and format (PDF/Excel); the system generates the secure file ready for download.

E. Roles and Permissions Management (RBAC) — Super Admin

The Roles and Permissions Management feature allows the Super Admin to control user access and privileges on the UNI STORE platform via the RBAC (Role-Based Access Control) model. It allows creating new roles tailored to platform needs, defining and modifying permissions associated with each role, associating each user with a specific role, and guaranteeing a consistent and secure access level according to role.

Action / Element	Type	Description	Validation
Create role	Text	Name of the role to create	Required field, unique
Edit permissions	Checkboxes / List	Selection of actions allowed for the role	At least one permission must be assigned
Associate user to role	Dropdown list	Choose the user and assign a role	Required validation
Access level	Selector	Define rights (Read, Write, Admin, Super Admin)	Required
Delete role	Button	Delete an existing role	Forbidden if the role is currently assigned

Detailed features:

Role creation:

- The Super Admin can create specific roles for internal Admin (Support, Moderation, Finance), Store Owner (with limited internal permissions), and other future needs.
- Each role receives a unique name and an optional description.

Permission editing:

Add or remove permissions from an existing role. Possible permissions: product management, order management, viewing statistics, user management, access to financial settings.

User association:

- Assign a role to a specific user
- Edit or revoke a user's role
- Immediate application of permissions in the system

Access level:

- Read-only
- Read/Write
- Partial administration

- Super Admin (full access)

Functional constraints:

- A role currently used by at least one user cannot be deleted.
- Strict adherence to the security principle and separation of privileges (least privilege principle).
- All changes must be logged for audit and traceability.
- Any assignment or modification of a role must take effect immediately in the system.

Usage scenario:

- Step 1: Create a role — the Super Admin creates an "Admin Support" role, assigns the corresponding permissions, access level: Read/Write.
- Step 2: Associate a user — select an existing user, assign them the "Admin Support" role; validation and change notification.
- Step 3: Edit permissions — the Super Admin adds a "View financial reports" permission to the role; users with this role immediately gain access.
- Step 4: Error handling — attempting to delete a used role → message: "Cannot delete this role, users are currently assigned to it." Invalid permissions → explanatory message.

F. Moderation and Compliance — Super Admin

The Moderation and Compliance feature allows the Super Admin to monitor and control all content published on the UNI STORE platform to ensure compliance with the rules and terms of use. It allows: verifying the compliance of published products, stores, and reviews; removing any non-compliant or illegal content; suspending or blocking accounts that violate the terms; and managing reports submitted by users.

Action / Element	Type	Description	Validation
Content list	Table	All published products, stores, reviews	Filterable by status, date, user
Filtering and search	Bar / Filters	Filter by content type, status, date, author	Dynamic results
Delete content	Button	Permanently removes a product, review, or store	Confirmation required
Suspend account	Button	Suspend a user violating the rules	Reason required
Report management	Table	View all reports received	Read-only, immediate action
Action history	Log / Journal	All moderation actions	Traceability required

Detailed features:

Content monitoring:

- The Super Admin can view: products published by stores, reviews left by clients, stores newly created or modified.
- Allows detecting violations of the Terms of Use or inappropriate content.

Content deletion:

- Delete a non-compliant product or review
- Delete a store in case of serious non-compliance
- Confirmation required before action

Account suspension:

- Temporarily or permanently suspend a client or store owner

- Reason recorded for traceability
- Automatic notification to the affected user

Report management:

- View reports made by users (products, reviews, stores)
- Process each report: content verification, decision (action / warning / block)
- History kept for audit

Functional constraints:

- All moderation actions must be traceable in the logging system.
- Deleted content must comply with retention and GDPR rules.
- Suspended accounts immediately lose access to platform features.
- Reports must be processed quickly to ensure compliance.

Usage scenario:

- Step 1: Access moderation — the Super Admin accesses the "Moderation and compliance" section; views the list of published content and reports.
- Step 2: Review a report — select a reported product or review; verify the content; decide to delete or keep the content.
- Step 3: Suspend an account — if a violation is confirmed, suspend the user account; record the reason and notify the user.
- Step 4: Traceability — all actions (deletion, suspension, warnings) are automatically recorded in the audit journal.

G. General Platform Configuration — Super Admin

The General Platform Configuration feature allows the Super Admin to configure and manage all global settings of the UNI STORE platform. It includes: configuring global parameters, managing payment methods and taxes, customizing notifications and alerts, and setting up security parameters.

Action / Element	Type	Description	Validation
Global parameters	Form / List	Title, logo, language, currency, time zone	Required, correct format
Payment methods	Table / Checkbox	Add, edit, remove methods (Stripe, PayPal...)	Compatibility and security check
Global taxes	Form	Define VAT rate or local taxes	Percentage value, required
System notifications	List / Toggle	Enable/disable alerts for new users, payments, subscriptions, promotions	Enabled per preference
Security settings	Form	Configuration of password rules, two-factor authentication, account lockout	Required validation and enhanced security
"Save" button	Button	Save all settings	Verification of all fields

Detailed features:

Global parameters:

- Platform name
- Logo and favicon
- Available languages

- Main currency
- Time zone

Payment method management:

- Add or remove payment gateways (Stripe, PayPal, bank transfer...)
- Enable or disable a method
- Verify transaction compatibility and security

Tax configuration:

- Set the global VAT rate or other applicable taxes
- Configure rules based on store location
- Automatic application to all transactions

System notification management:

- Notifications for: new users, payments received, subscription expiration, promotions and special offers
- Enable or disable each notification type
- Customize the channel: email, SMS, push

Security settings:

- Define password rules: minimum length, complexity
- Enable two-factor authentication (2FA)
- Configure account lockout after several failed attempts
- Manage active sessions and force logout if necessary

Functional constraints:

- All changes must be recorded immediately and traceable in the logging system.
- Payment methods must comply with PCI-DSS standards and other security standards.
- Notifications must be configurable without interrupting service.
- Security settings must be automatically applied to all users.

Usage scenario:

- Step 1: Access configuration — the Super Admin goes to the "General configuration" section.
- Step 2: Configure settings — edit the logo, language, or currency; add a payment method and set the tax rate; enable system notifications as preferred; set security and password rules.
- Step 3: Save — click "Save"; the system validates all fields and displays: "Settings saved successfully."
- Step 4: Traceability — all changes are logged in the audit journal for future review.

5.1.4 Store Admin

Store Management — Store Admin

The Store Admin is responsible for the day-to-day management of a store on the UNI STORE platform. Their responsibilities include: product and stock management, order and customer tracking, promotion and store content management, and access to internal store statistics.

Action / Element	Type	Description	Validation
Product management	Table / Form	Add, edit, delete products	Required validation of fields (name, price, stock)
Category management	Form	Create, edit, or delete categories	Unique name required

Order management	Table	View all store orders	Read-only / status update
Customer management	Table	Information on customers who placed orders	Read-only
Promotion management	Form	Create promo codes or special offers	Date and condition validation
Product review management	Table	View and respond to product reviews	Can flag to Super Admins
Store dashboard	Charts / Widgets	Internal statistics: sales, best-selling products, active customers	Read-only
Store settings	Form	Edit store information: name, logo, description, address	Required validation

Detailed features:

Product management:

- Add a new product with: name, description, images, price, available stock
- Edit or delete an existing product
- Filter and sort products by category, price, popularity

Order management:

- View all received orders
- Edit the status: In progress, Shipped, Delivered, Cancelled
- Track payments and alerts on pending orders

Customer management:

- Access the list of customers who bought from the store
- View order history and reviews left

Promotion management:

- Create temporary offers or promo codes
- Define the validity period and conditions
- Enable or disable the promotion

Product review management:

- View all reviews left by customers on products
- Respond to or flag problematic reviews to Super Admins

Internal dashboard:

- View overall store sales
- Best-selling products
- Active customers
- Orders in progress

Store settings:

- Edit name, logo, description
- Manage contact and address information
- Configure the public display of the store

Functional constraints:

- The Store Admin can only access their own store's data.
- All changes must be traceable in the system.
- Deleted products must comply with retention rules and order history.
- Promotions must respect the defined validity to avoid pricing conflicts.

Usage scenario:

- Step 1: Product management — add a product → fill in all fields → validate → product published immediately.
- Step 2: Order management — view the order list → change the status → automatic notifications to customers.
- Step 3: Promotion management — create a promotion → define start and end dates → activate.
- Step 4: Dashboard review — view sales, best-selling products, and active customers → analyze store performance.

5.1.5 Manager

Internal Store Management — Manager

The Manager is an internal store user responsible for certain operational tasks within the store on UNI STORE. Their responsibilities include: product and stock management, order and customer tracking, promotion management, and limited access to internal reports. Unlike the Store Admin, the Manager does not have access to global store settings or sensitive financial/full user information.

Action / Element	Type	Description	Validation
Product management	Table / Form	Add, edit, delete products	Required validation of fields (name, price, stock)
Category management	Form	Create, edit, or delete categories	Unique name required
Order management	Table	View all store orders	Read-only / status update
Customer management	Table	Limited access to customers who placed orders	Read-only, no editing of sensitive data
Promotion management	Form	Create promo codes or special offers	Date and condition validation
Store dashboard	Charts / Widgets	Internal statistics: sales, best-selling products, orders	Read-only
Product review management	Table	View and respond to customer reviews	Can flag to Admins if necessary

Detailed features:

Product management:

- Add a new product with: name, description, images, price, stock
- Edit or delete an existing product
- Filter and sort products by category, price, popularity

Order management:

- View received orders
- Update status: In progress, Shipped, Delivered, Cancelled
- Automatic notifications for order tracking

Customer management:

- Access customer order history and reviews
- No access to sensitive financial information

Promotion management:

- Create and manage promo codes or temporary offers
- Define start and end dates
- Automatic activation/deactivation

Product review management:

- View all reviews left on products
- Respond to reviews and flag problematic ones to the Store Admin

Internal dashboard:

- View sales, best-selling products, orders in progress
- Support for operational planning of the store

Functional constraints:

- The Manager can only access their own store's data.
- Sensitive actions (store deletion, global settings changes) are reserved for the Store Admin.
- All changes must be traceable in the system.
- Promotions and products must respect the limits set by the role and subscription plan.

Usage scenario:

- Step 1: Product management — add a product → fill in all fields → validation → immediate publication.
- Step 2: Order management — view orders → update status → automatic notifications to customers.
- Step 3: Promotion management — create a promotion → define the period → activate.
- Step 4: Dashboard review — track sales, popular products, and orders in progress → analyze operational performance.

5.1.6 Support**Customer and Store Request Management — Support**

Support is an internal user of the store or the UNI STORE platform responsible for assisting customers and store owners. Their responsibilities include: order tracking and resolving customer issues, assistance with products and reviews, handling reports or complaints, and limited access to store or customer information. Support has no access to global settings, financial changes, or sensitive products.

Action / Element	Type	Description	Validation
Order tracking	Table	View orders in progress or reported issues	Read-only / status update if authorized
Customer complaint management	Form / Table	Receive and process complaints	Required validation to close a ticket
Product review management	Table	View customer reviews and reports	Can flag problematic reviews to the Store Admin
Customer communication	Built-in messaging	Send messages / responses to customers	History retained
Support dashboard	Widgets / Charts	Ticket tracking, problematic orders, support performance	Read-only

Detailed features:**Order tracking:**

- View all orders with issues or delays
- Update status if authorized by the role
- Provide tracking updates to customers

Complaint management:

- Receive customer requests (product not received, damaged product, payment issue...)
- Handle the complaint with notes and actions
- Close the ticket once resolved

Product review management:

- View all customer reviews
- Respond to questions or flag problematic content to Store Admins

Customer communication:

- Send secure messages via the internal system
- History of all communications kept for audit

Support dashboard:

- View the number of open / closed tickets
- Track problematic orders
- Individual and team support performance

Functional constraints:

- Support can only access data needed for assistance, not sensitive settings.
- All actions must be traceable in the system for audit.
- Responses to customers must be automatically logged.
- Reviews and reports must be handled according to priorities set by the Store Admin.

Usage scenario:

- Step 1: Order tracking — view the list of delayed orders → contact the customer → log the action.
- Step 2: Complaint management — open a customer ticket → resolve or escalate → close the ticket → automatic notification to the customer.
- Step 3: Review management — view problematic reviews → respond or flag to Admins.
- Step 4: Support dashboard — review ticket performance → analyze trends → weekly report.

5.2 Store Management

5.2.1 Creation and Validation

- An owner can create a store via a configuration form (name, logo, description, categories).
- The store is set to "Pending" status until validated by the Super Admin.
- After approval, the store becomes "Active" and can sell.
- In case of refusal, a reason is communicated to the owner.

5.2.2 Multi-tenant Isolation Rules

- Each store can only access its own data (products, orders, customers, revenue).

- No data from one store is visible to another store.
- The architecture guarantees logical separation of data by store.

5.2.3 Functional Requirements

- A vendor can create a store.
- The store must be validated by the Super Admin before any commercial activity.
- The Super Admin can suspend or delete a store at any time.
- A suspended store can no longer accept orders.

5.3 Product Management

The product module covers both the admin panel (back-office) and the client interface (front-end), including all forms, fields, behaviors, and interactions derived from the database schema.

5.3.1 Functional Scope of the Product Module

Element	Functional Description
Product	Main catalog entity. Contains basic commercial information, publication status, delivery information, and supplier data.
Product variants	Variations of the same product (e.g., Red / XL). Each variant has its own price, stock, and unique SKU.
Categories	Hierarchical organization of products into top-level niches (e.g., Fashion, Electronics) and sub-categories.
Attributes	Reusable characteristics definable per niche (Color, Size, Material, Pattern, Weight, etc.).
Attribute values	The possible values for each attribute (e.g., Red, Blue for Color; S, M, XL for Size).
Niche-specific attributes	Characteristics specific to a particular niche (e.g., Fit, Style, Season for Fashion) associated with a product or variant.
Keywords / Tags	Free-form labels for finding and grouping products by theme.
Media	Images, videos, and banners associated with products and their variants.

5.3.2 Product Administration — List Page

- Search bar — full-text search on product names
- Status filter — options: All, Active (Published), Draft
- "Add product" button — redirects to the add-product form

Displayed field	Type	Functional Description
Product	Image + Text	Product thumbnail, name in bold, and brand below. Featured products are visually flagged.
Categories	Tags	Sub-categories assigned to the product, displayed as tags.
Reference (SKU)	Text	Unique stock management reference, auto-generated at creation and editable.
Price	Currency (MAD)	Selling price of the default variant.
Stock	Number	Available quantity. A visual alert is shown when stock is low or depleted.
Status	Badge	Indicates whether the product is Published (visible to customers) or Draft (hidden).
Actions	Buttons	Edit or delete the product (with mandatory confirmation).

5.3.3 Add / Edit Product Form

Niche / Category Selector

First field of the form. Determines the product's top-level niche (e.g., Fashion, Electronics). Selecting a niche dynamically reveals niche-specific attribute sections in the Product Attributes panel.

Field	Type	Required	Notes
Niche	Dropdown list	Yes	Selection of the main product category. This choice dynamically determines the specific attributes displayed in the form (e.g., selecting 'Fashion' reveals Material, Fit, Style, Season, Gender).

Basic Information

Field	Type	Required	Description / Rule
Cover image	Image upload	Yes	Main image representing the product in the catalog and search results.
Product name	Text	Yes	Main title of the product as shown to customers. Recommended length ≤ 200 characters.
Brand	Text	Yes	Name of the product's brand or manufacturer.
Description	Rich text editor	Yes	Full product description with formatting (bold, italics, lists, links, alignment).

Pricing

Field	Type	Required	Description / Rule
Selling price	Decimal (MAD)	Yes	Price shown to customers. Must be a positive amount, up to two decimal places.
Crossed-out price	Decimal (MAD)	No	Former price shown crossed out to indicate a discount. Optional.
Price preview	Live display	—	Real-time preview of the price / crossed-out price rendering as seen by the customer.

Media Management

Field	Type	Required	Description / Rule
Additional images	Multiple upload	No	Gallery of additional images. Drag-and-drop supported.
Embedded video (iFrame)	URL / Embed code	No	Video embed via YouTube, Vimeo, or another platform.
Uploaded video	Video file	No	Direct upload of a product video.

Inventory and Stock (Side Panel)

When the variant builder is enabled, stock is managed individually per variant rather than at the product level.

Field	Type	Required	Description / Rule
Stock quantity	Integer	No	Quantity available for sale. An alert is automatically shown when stock becomes low.
Product reference (SKU)	Text	No	Unique stock-management reference. Auto-generated, manually editable. Must be unique across the entire platform.
Out-of-stock behavior	Dropdown list	No	Defines what happens when stock reaches 0: block the order, allow with customer notification, or allow without notification.

Shipping (Side Panel)

Field	Type	Required	Description / Rule
Height	Decimal (cm)	No	Height of the product package.
Width	Decimal (cm)	No	Width of the product package.
Length	Decimal (cm)	No	Length of the product package.
Weight	Decimal (kg)	No	Product weight, used to calculate shipping costs.
Shipping class	Selection	No	Applicable shipping pricing tier: Standard, Express, Bulky, Fragile.

Variant Builder (Toggle Section)

A section that can be enabled or disabled. When enabled, the vendor can define multiple variations of the product, each with its own commercial characteristics.

Field	Type	Required	Description / Rule
Enable variants	Toggle	No	Enables or disables variant management. Without variants, only a single instance of the product is managed.
Price (per variant)	Decimal (MAD)	Yes if variant	Selling price specific to this variation.
Crossed-out price (per variant)	Decimal (MAD)	No	Former crossed-out price for this variation. Optional.
Stock (per variant)	Integer	No	Available quantity for this specific variation.
Reference (variant SKU)	Text	No	Unique reference for this variation. Auto-generated, editable.
Variant attributes	Key-Value	No	Combination of attributes defining this variant (e.g., Color = Red, Size = XL).
Default variant	Toggle	No	Designates the variant displayed first on the product page.
Variant image	Image upload	No	Image specific to this variation, shown when the customer selects it.

Product Attributes (Toggle Section — Dynamic by Niche)

This section is generated automatically according to the selected niche. The displayed fields change depending on the category: selecting 'Fashion' reveals Material, Fit, Style, Season, and Gender. Adding a new niche requires no interface changes.

Field (example: Fashion niche)	Type	Description
Materials	Multi-select	Types of materials (e.g., Cotton, Polyester, Denim).
Fit	Selection	Type of fit (e.g., Slim Fit, Regular Fit, Oversize).
Style	Selection	Style category (e.g., Casual, Formal, Sport).
Seasons	Multi-select	Applicable seasons (e.g., Winter, Summer, All seasons).
Gender	Selection	Target gender (e.g., Men, Women, Unisex, Kids).

SEO / Marketing (Side Panel)

Field	Type	Description / Rule
SEO title	Text	Title displayed in search engine results. Pre-filled with the product name and brand. Recommended maximum: 60 characters.
SEO description	Long text	Short description shown below the title in search results. Recommended maximum: 160 characters.

Supplier Information (Side Panel)

Field	Type	Description / Rule
Supplier name	Text	Name of the product's supplier or manufacturer.
Supplier reference	Text	Internal reference code assigned by the supplier.
Notes	Long text	Additional information or comments about the supplier.

5.3.4 Client Catalog (Front-end)

Dynamic Filters by Niche

Filter	Behavior
Price range	Filter by price range. Based on variant prices.
Category / Sub-category	Filter by sub-categories of the current niche.
Color	Clickable swatches. Filters products with at least one variant matching the

	selected color.
Size	Button group. Shows sizes available across all product variants.
Niche attributes	For each niche attribute (e.g., Material, Fit, Style, Season, Gender for Fashion), a matching filter control is rendered.
Tags / Keywords	Filter by associated tags.
Brand	Checkbox list to filter by brand.
Free shipping	Checkbox to show only products with free shipping.

Sorting Options

- Newest (default) — most recently added products shown first
- Price: low to high
- Price: high to low
- Top rated — products with the best average rating shown first
- Most popular — products with the most reviews shown first
- Featured — products marked as "favorites" appear at the top of the list

5.3.5 Product Business Rules

Ref.	Rule
RG-P01	A product can only be published if all required fields are filled in: name, brand, description, selling price, and cover image.
RG-P02	Each product and each variant must have a unique reference across the entire platform. This reference is auto-generated at creation and can be manually edited by the admin.
RG-P03	Uploaded media (images, videos) are permanently saved only when the product form is validated. Until the form is saved, media remain in a temporary state.
RG-P04	A product must be attached to exactly one niche (main category). Assignment to sub-categories is optional and can be multiple.
RG-P05	A variant's attributes (color, size, etc.) are defined when the variant is created and uniquely identify each variation of the product.
RG-P06	When a variant is created, edited, or deleted, the system automatically updates the consolidated list of attributes available for that product, so that catalog filters remain consistent.
RG-P07	The filter fields displayed on the catalog (niche-specific attributes) are dynamically determined by the product's niche. Adding a new niche requires no interface changes.
RG-P08	Deleting a category removes that category from all products attached to it. Affected products remain visible but without an assigned category.
RG-P09	The crossed-out price is an indicative reference value shown to customers to signal a discount. It is independent of any promotion or coupon system.
RG-P10	Only products with 'Published' status are visible to customers. Products in 'Draft' status are accessible only to store administrators.

5.4 Order Management

The order module covers the entire order lifecycle: from creation to delivery or cancellation, including payment processing, application of promotional coupons, tracking, and automated notifications.

5.4.1 Functional Scope of the Order Module

Element	Functional Description
Order	Central entity of the module. Groups all information about a purchase: items, amounts, payment method, status, and delivery details.
Ordered items	Detail of each product included in the order, with price and quantity fixed at the time of purchase (independent of any later product changes).
Addresses	Delivery and billing addresses are permanently saved at the time of the

	order, independent of the client's account addresses.
Promotional coupons	Discount codes applicable under conditions set by the vendor (minimum amount, categories, validity period, number of uses).
Status history	Full traceability of every status change of an order: who made the change, when, and with what note.
Payment transactions	Tracking of financial operations related to the order: payment, refund, or failure, with reference to the Stripe transaction where applicable.
Coupon usage tracking	Tracking of promo code usage per user and per order to enforce defined limits.

5.4.2 Order Creation — Client Flow

Mode 1: Cart Checkout

- The client reviews their cart: list of items, quantities, subtotals per item.
- The system checks stock availability in real time for each product variant.
- The client can apply a coupon code.
- The client enters or selects their delivery address.
- The client chooses the payment method: card (Stripe) or COD.
- A final summary is displayed: items, shipping fees, discount, taxes, total incl. tax.
- The client submits the order. The system creates the record and triggers the payment.

Mode 2: Buy Now (Direct Purchase)

- The client selects the variant (size, color, etc.) and quantity from the product page.
- They are redirected directly to checkout with a temporary single-item cart.
- The rest of the flow is identical to the cart checkout.

Guest Checkout vs Authenticated Client

Aspect	Behavior
user_id field	Nullable → a guest can place an order without creating an account.
Guest restrictions	The guest cannot apply a coupon with a per-user limit. These coupons require authentication.
Order history	Only authenticated clients have access to their order history and tracking page.
Address	The guest manually enters their address with each order. It is permanently saved with the order.

5.4.3 Promotional Coupon System

Discount Types

Type	Description
percentage	Percentage discount on the total amount. E.g., 20% → a 500 MAD cart becomes 400 MAD.
fixed	Fixed-amount discount in MAD. E.g., 50 MAD → a 300 MAD cart becomes 250 MAD.

Eligibility Conditions & Usage Limits

Condition	Functional Rule
Minimum cart amount	The coupon applies only if the cart total reaches a minimum amount set by the vendor.
Minimum number of items	The coupon applies only if the cart contains at least a defined number of items.
Product restriction	The coupon can be limited to specific products. The discount only applies to the relevant items in the cart.
Category restriction	The coupon can be limited to one or more product categories.

Validity period	The coupon can only be used between a start date and an end date. Any coupon used outside this period is automatically refused.
Activation / Deactivation	The vendor can manually enable or disable a coupon at any time, independent of its validity period.
Maximum global usage count	The coupon can be limited to a total number of uses across all users. Once this cap is reached, it is automatically refused.
No per-user limit	When no per-user limit is defined, the coupon can be used by anyone, including non-logged-in visitors.
Per-user limit	When a per-user limit is defined, login is required. The system checks the coupon's usage history for that user.

Real-Time Feedback

Message	Condition
Coupon applied	Valid code. Discount amount displayed in green.
Invalid code	The code does not exist.
Coupon expired	The coupon's validity date has passed.
Coupon inactive	The coupon has been manually disabled by the vendor.
Minimum amount not reached	The cart total is below the required minimum amount. The missing amount is shown to the client.
Insufficient number of items	The cart contains fewer items than the minimum required by this coupon.
Global limit reached	The coupon has already been used the maximum number of times allowed.
Per-user limit reached	Coupon already used the maximum number of times by this user.
Login required	Coupon with a per-user limit, but the client is not logged in.
Not applicable to items	Cart items not covered by the product/category restrictions.

5.4.4 Order Statuses and Lifecycle

Status	Description
pending	Order created, awaiting admin confirmation and/or payment.
confirmed	Order confirmed by the administrator. Order preparation can begin.
out_for_delivery	Order handed to the courier, in transit.
delivered	Order successfully delivered.
delivery_failed	Delivery attempt failed (customer absent, address not found, etc.).
canceled	Order cancelled (by the client if pending, by the admin at any stage).
returned	Order returned after delivery.

Flow: pending → confirmed → out_for_delivery → delivered. In case of an issue: delivery_failed → new attempt or returned. Cancellation possible: canceled.

Transition Rules

Actor	Transition Rights
Client	Can cancel their order only while it is still pending and has not yet been confirmed by the administrator.
Admin / Order Manager	Can change the status at any stage, with a mandatory note.
Warehouse Staff	Can only move the status through: confirmed → out_for_delivery → delivered or delivery_failed.
System	Can automatically trigger a payment-failure status.

5.4.5 Automatic Email Notifications

Event	Email Content
Order received (pending)	Order confirmation with summary.
Order confirmed	The order is being prepared.
Out for delivery	Your order is on its way.
Delivered	Delivery confirmation.

Cancelled	Cancellation confirmed (+ refund information if applicable).
Payment failed	Payment failed. Retry link included.
Delivery failed	Failed delivery attempt.

5.4.6 Administration Interface — Orders

Roles and Access Rights

Role	Permissions
Super Admin	Full access: edit anything, coupon management, role management, forced refunds.
Order Manager	Full access to orders: list, detail, status change, confirmation, notes.
Support Agent	Read-only. Can view and add internal notes. Cannot change status.
Warehouse Staff	Can only update logistics status: confirmed → out_for_delivery → delivered/delivery_failed.

Order List

- Columns: order number, customer, date, amount, payment method, payment status, order status.
- Filters: by status, payment method, date range, admin confirmation.
- Search: by order number, customer name, email.
- Sorting: by date (default descending), amount, status.
- Export: filtered list in Excel or CSV.

Order Detail (Admin)

- Full summary: items, addresses, payment, coupon used.
- Status change block with a mandatory note.
- Admin confirmation button: confirms order handling and triggers preparation.
- History timeline with author and timestamp.
- Internal notes (admin-only visibility).
- Payment information: status, transaction reference, settlement date.
- Manual refund action (Super Admin / Order Manager only).

5.5 Payment

5.5.1 Payment Methods

Method	Behavior
COD (Cash on Delivery)	Payment upon delivery. "paid" remains false until confirmation. No Stripe transaction.
Card (Stripe)	Secure online card payment. The order is confirmed as soon as Stripe validates the payment. The settlement date and time are recorded automatically.

5.5.2 Stripe Payment Flow

- The client selects card payment at checkout.
- The system prepares a secure payment session via Stripe.
- The client enters their card details in the secure Stripe form (PCI-compliant).
- Success: the order is immediately confirmed, and the payment is recorded with its date and time.
- Failure: the order remains pending. The client receives a notification with a link to retry payment. If no attempt succeeds within the configured window (e.g., 30 minutes), the order is automatically cancelled.

5.5.3 Refunds

Scenario	Action
COD cancelled	No financial refund. Status becomes canceled.
Card cancelled	Automatic refund via Stripe Refund. Credited to the original card within 5–10 business days.
Traceability	Every refund operation is recorded in the order's financial history with the date, amount, and corresponding Stripe reference.

5.6 Dashboard & Reporting

The Dashboard is the main control interface for each store and for the overall platform. It provides real-time key indicators, analytical charts, rankings, and exportable reports. It is accessible to the Store Owner, Store Admin, and Manager according to their permissions.

Feature: Global Dashboard and Reporting — Super Admin

The Global Dashboard and Reporting feature gives the Super Admin an overview of the UNI STORE platform. It provides: key statistics on users and stores, total revenue, growth trends, and detailed analytical reports to support decision-making.

Element	Type	Description	Validation
Number of users	Widget / Card	Total clients, owners, and admins	Automatic update
Number of active stores	Widget / Card	Total stores with "Active" status	Read-only
Total revenue	Widget / Chart	Total revenue generated by the platform	Real-time update
Growth statistics	Charts / Graphs	Evolution of users, stores, and sales over defined periods	Read-only
Analytical reports	Table / Export	PDF / Excel export with performance details	Read-only and secure export
Time filters	Selector	Filter data by day, week, month, year	Applied immediately

Detailed features:

General overview:

- Total number of users
- Number of active stores
- Total revenue
- Interactive widgets for quick visualization

Growth statistics:

- Charts showing user growth over time
- Growth of active stores
- Revenue evolution
- Comparison across different periods (month, quarter, year)

Analytical reports:

- Store performance
- Revenue by subscription type
- Number of orders and sales per period
- PDF or Excel export for external analysis

Filters and customization:

- Filter by period or data type
- Choice of chart or table display
- Ability to customize the dashboard to the Super Admin's needs

Functional constraints:

- Data must be updated in real time or near-real time.
- Exported reports must be secure and accessible only to Super Admins.
- Charts and widgets must accurately reflect the data stored in the database.
- All export or viewing actions must be logged for traceability.

Usage scenario:

- Step 1: Access the dashboard — the Super Admin logs in and opens the "Global dashboard" section.
- Step 2: View indicators — quick view of the number of users, active stores, and total revenue; growth trends are observed via charts.
- Step 3: Generate reports — click "Export report"; choose period and format (PDF / Excel); secure download and confirmation.
- Step 4: Traceability — every viewing and export is automatically logged in the audit journal.

5.6.1 Store Dashboard — KPIs (Key Performance Indicators)

The following indicators are displayed as comparative widgets (current period vs. previous period):

Indicator	Description	Comparison
Total Revenue	Total revenue for the selected period	vs. previous period (%)
Number of Orders	Total validated orders	vs. previous period
Number of Customers	Total customers who made at least one purchase	vs. previous period
Unique Visitors	Number of unique visitors to the store	vs. previous period
Average Order Value (AOV)	Revenue / Number of orders	vs. previous period
Conversion Rate	Visits → Purchases (%)	vs. previous period
Cart Abandonment Rate	% of carts not completed	vs. previous period
Refund Rate	% of orders refunded	vs. previous period

5.6.2 Store Dashboard — Analytical Charts

Revenue Charts

- Revenue over time (line chart) — hourly/daily/weekly/monthly view with a previous-period comparison line overlaid
- Revenue by category / niche (stacked bar chart)
- Revenue by traffic source: organic, social media, direct, paid advertising (pie chart)
- Revenue by payment method — COD vs. Card (pie chart)
- Revenue by region / city (heat map or horizontal bars)
- Average order value (AOV) trend over time (line chart)

Sales Charts

- Sales volume vs. Revenue (dual axis — units sold on the left, amount on the right)
- Sales by product variant (color, size...)
- Return / refund rate over time (line chart)

Traffic & Conversion Charts

- Conversion funnel: Visits → Add to cart → Checkout → Purchase (funnel chart with % at each stage)

- Conversion rate evolution over time
- Cart abandonment rate by period
- Bounce rate by page / device

Customer Charts

- New vs. returning customer ratio (donut chart)
- Customer lifetime value (CLV) — distribution by segment
- Customer acquisition trend over time (stacked bar chart — New / Returning)
- Geographic distribution of customers (interactive map)

Stock & Product Charts

- Stock level per product (bars — critical threshold in orange, out-of-stock in red)
- Stock turnover rate (sell-through speed per product)
- Visual out-of-stock alerts on the dashboard

5.6.3 Store Dashboard — Tables & Rankings

Module	Content	Default Sort
Best Sellers — Products	Top products by number of sales and revenue generated, with variation vs. previous period	Revenue descending
Top Categories	Best-performing categories with % contribution to total revenue	Revenue descending
Top Customers	Customers with the highest cumulative total spend (CLV)	Total amount descending
Recent Orders	Last 10 orders with status, amount, customer	Date descending
Recent Reviews	Latest customer reviews with rating and related product	Date descending

5.6.4 Store Dashboard — Real-Time Widgets

- Visitors currently online (live counter updated every 30 seconds)
- Feed of the last 5 orders (automatic update without page reload)
- Low-stock / out-of-stock alert panel (with direct link to the product)
- Notification center: new orders, new reviews, pending disputes
- Quick actions: process a pending order, add a product directly from the dashboard

5.6.5 Store Dashboard — Customization

- Drag-and-drop widgets to rearrange the dashboard according to preferences
- Show / hide modules as needed
- Set custom KPI goals (e.g., "Goal: 50,000 MAD this month") with a progress bar
- Dark mode / light mode

5.6.6 Time Filters — Dashboard

All charts and KPIs support the following date ranges:

Filter	Description
Today	Current day's data with hourly granularity
Last 7 days	Weekly view with daily granularity
Last 30 days	Monthly view
Last 3 months	Quarterly view

Last 12 months	Annual view
Custom period	Free date selector (start date / end date)
Period comparison	Overlay two periods on the same chart to visualize evolution

5.6.7 Reports Section — Store

Reports allow for exportable, in-depth analysis for each store.

Report	Content	Export Formats
Sales Report	Sales by period, category, product, variant	CSV, PDF, Excel
Customers Report	New, returning, inactive customers, top customers	CSV, Excel
Inventory Report	Stock levels, movements, out-of-stock alerts	CSV, Excel
Financial Report	Revenue, refunds, commissions, estimated net profit	PDF, Excel
Tax Report	Structured data for accounting and tax filings	PDF, Excel
Abandoned Carts Report	Uncompleted carts with customer info (if logged in)	CSV, Excel
Orders Report	Detail of all orders, filterable by status	CSV, PDF, Excel

Report Features:

- Customizable date range selector for each report
- Side-by-side comparison of two periods within the same report
- Automatic scheduling: email delivery (daily / weekly / monthly)
- Online preview before export
- Security: each report is accessible only to the store's authorized roles

6. Business Rules

The business rules define the constraints the system must respect to guarantee consistency, security, and proper operation of the UNI STORE SaaS platform.

6.1 Rules Related to Users

RG-01 — Account Uniqueness

- Each user must have a unique email address.
- An email cannot be used for multiple accounts.

RG-02 — Secure Authentication

- The password must be encrypted in the database.
- The current password is required for any change.

RG-03 — Mandatory Roles

- Every user must be associated with a role.
- A user cannot exist without a defined role.

RG-04 — Main Super Admin

- The main Super Admin cannot be deleted.
- There must always be at least one active Super Admin.

RG-05 — Traceability

- Any sensitive change (deletion, suspension, role modification) must be recorded in the system logs.

6.2 Rules Related to Stores (Multi-tenant)

RG-06 — Data Isolation

- Each store can only access its own data.
- No data from one store may be visible to another.

RG-07 — Store Validation

- A new store must be validated by the Super Admin before publication.

RG-08 — Store Suspension

- In case of rule violations, the Super Admin can suspend a store.
- A suspended store can no longer accept orders.

RG-09 — Single Owner

- Each store must have a single primary Store Owner.

6.3 Rules Related to Products

RG-10 — Mandatory Ownership

- A product must necessarily belong to a store.

RG-11 — Stock

- Stock cannot be negative.
- An order cannot be validated if stock is insufficient.

RG-12 — Product Deletion

- A product linked to a past order cannot be permanently deleted (archiving only).

6.4 Rules Related to Orders

RG-13 — Unique Number

- Each order must have a unique, automatically generated identifier.

RG-14 — Order Status

- Statuses must follow a logical order: Pending → Confirmed → Shipped → Delivered.
- A delivered order can no longer be modified.

RG-15 — History

- Order history cannot be deleted.

6.5 Rules Related to Subscriptions (SaaS)

RG-16 — Mandatory Plan

- A store must have an active subscription to operate.

RG-17 — Plan Limits

- Plan limits must be respected: maximum number of products, employees, access to advanced features.

RG-18 — Subscription Expiration

- Upon expiration: certain features are suspended.
- New orders may be blocked according to the defined policy.

RG-19 — Notification

- A notification must be sent before expiration (e.g., 7 days before).

6.6 Financial Rules**RG-20 — Commission**

- Every transaction must automatically apply the commission defined by the Super Admin.

RG-21 — Validated Payment

- An order is confirmed only if payment is validated.

RG-22 — Financial Reports

- Financial data must be consistent and not manually editable.

6.7 RBAC Rules (Role Management)**RG-23 — Separation of Privileges**

- A role cannot combine conflicting permissions.

RG-24 — Role Deletion

- A role used by at least one user cannot be deleted.

RG-25 — Dynamic Permissions

- Any change to a role immediately affects associated users.

6.8 Security and Compliance Rules**RG-26 — Moderation**

- The Super Admin can delete any non-compliant content.

RG-27 — Reports

- Reports must be logged and processed.

RG-28 — Personal Data Protection

- Customer data must be protected.
- Access to sensitive information must be restricted.

6.9 Reporting and Dashboard Rules**RG-29 — Statistical Accuracy**

- Statistics must be generated only from validated data.

RG-30 — Access to Statistics

- Each role only sees the statistics it is authorized to view.

RG-31 — Real-Time Dashboard Data

- Dashboard KPIs and charts must be updated in real time or near-real time.
- Exported data must exactly match the displayed data.

RG-32 — Exported Reports

- Exports (CSV, PDF, Excel) are secure and accessible only to authorized roles.

- Every export action is logged in the audit journal.

6.10 Technical SaaS Rules

RG-33 — Multi-tenant

- The system must support multiple stores simultaneously without any data contamination between stores.

RG-34 — Availability

- The system must be available 24/7 (except for scheduled maintenance).

RG-35 — Scalability

- The architecture must allow new stores to be added without major performance degradation.

Conclusion of the Business Rules

These business rules guarantee: security, business consistency, data isolation, adherence to the SaaS model, hierarchical role control, and the platform's financial stability.
